Sugar Corporate 6.5.17 Release Notes

Overview

This document describes fixed and known issues, supported platforms, and acknowledgments for Sugar 6.5.17.

Fixed Issues

Sugar 6.5.17 is a security update released to address certain security vulnerabilities identified during our routine QA checks.

We strongly recommend that you install this update at the earliest opportunity. While we have not experienced any reported incidents relating to these vulnerabilities to date, failure to install this update could leave you exposed to the following types of malicious third party attacks:

- Authenticated users may retrieve cryptographic hashes of user passwords.
- Authenticated users may create a situation where they can read local files, scan ports, detect internal networks or execute commands.
- Email account passwords may be sent in the clear.
- Authenticated users may become admin users.

These vulnerabilities have been addressed in release 6.5.17 which is available for download from the [Download Manager](#).

Administrators are strongly encouraged to upgrade their Sugar instances running 6.5.x or earlier to 6.5.17 to prevent potential exploitation of these weaknesses.

Upgrade Notes

Instances must be running 6.5.x prior to upgrading to 6.5.17.

Known Issues

The following are known issues with Sugar 6.5.17:

- Shipping not updating due to Sugar Logic : Shipping field in the Grand Total

and Line Items section of quotes does not update as expected when the Shipping field is calculated via Sugar Logic.
Bug associated with this issue: 62064

Supported Platforms

For information on supported platform components, see [Sugar 6.5.x Supported Platforms](#).

Acknowledgments
